

Build a React-based Nutrition & Meal Tracking App for a fitness recomposition goal. The app should have the following features and design:

USER PROFILE (hardcoded as default):

- Name: Himanshu
- Age: 26 | Weight: 83kg | Height: 6ft (183cm)
- Goal: Skinny Fat Loss + Muscle Gain
- Daily Calorie Target: 2,200-2,400 kcal
- Protein Target: 160-170g | Carbs: 220-250g | Fat: 60-70g

CORE FEATURES:

1. WEEKLY MEAL PLAN VIEW

- Show all 7 days in a weekly calendar layout
- Each day shows the activity (Badminton / Football / Rest)
- Each day has 4-5 planned meals with time, meal name, food description, and macros (calories, protein, carbs, fat)
- Use the following weekly plan data as default content:
 - Mon-Thu: Badminton 8-9am
 - Fri: Football 9-10:30pm
 - Sat: Light activity
 - Sun: Full rest day

2. DAILY VIEW (tap any day to open)

- Show planned meals in a timeline layout by time of day
- Each meal card shows: time, meal type, food name, cal/protein/carb/fat
- Show a daily macro progress bar (planned vs target)
- A floating "+" button to log actual food eaten

3. FOOD LOGGER (the key feature)

- User can tap any planned meal and mark it as "Eaten as planned" OR "Log what I actually had"
- If logging actual: show a form with fields:
 - * Food name (text input)
 - * Calories (number)
 - * Protein (number)
 - * Carbs (number)
 - * Fat (number)
 - * Optional note
- After logging, the meal card updates to show actual vs planned side by side

- Color code the difference:
 - * Green if within 10% of target
 - * Orange if over/under by 10-20%
 - * Red if over/under by 20%+

4. DAILY MACRO DASHBOARD

- At top of each day view show 4 macro rings/progress bars:
 - * Calories (target: 2,200-2,400)
 - * Protein (target: 160-170g)
 - * Carbs (target: 220-250g)
 - * Fat (target: 60-70g)
- Show: Planned | Logged | Remaining
- Remaining turns red if over target

5. WEEKLY PROGRESS SUMMARY

- A summary screen showing all 7 days
- Bar chart or visual showing daily calories: planned vs actually logged
- Weekly averages for all 4 macros
- A streak counter: "X days this week you hit your protein target"
- Days where no logging was done shown as "Not logged yet"

6. SNACK SUGGESTIONS PANEL

- A tab or bottom sheet showing snack options categorised as:
 - * High Protein
 - * Pre-Workout
 - * Evening / Pre-Bed
 - * Calorie Boost
- Each snack shows cal/protein/carbs/fat and best timing
- User can tap "Add to today" to log a snack directly

UI / UX REQUIREMENTS:

- Mobile-first design optimised for phone screen
- Primary colors: Dark green (#1A5276) and white, accent: (#1E8449)
- Clean card-based layout with subtle shadows
- Bottom navigation bar with 4 tabs: Today | Week | Log | Snacks
- Smooth transitions between views
- Use Recharts for all charts and graphs
- Use emoji icons for meals and activity types
- All data persisted using window.storage API so logs survive between sessions

DATA STRUCTURE (window.storage):

Store the following structure:

```
{
  "weekPlan": { ...7 days of planned meals... },
  "logs": {
    "YYYY-MM-DD": {
      "meals": [
        {
          "mealId": "mon-breakfast",
          "loggedFood": "Egg bhurji + toast",
```

```
      "calories": 420,  
      "protein": 28,  
      "carbs": 35,  
      "fat": 16,  
      "note": "Added extra egg",  
      "status": "logged_actual"  
    }  
  ],  
  "water": 2500  
}  
}  
}
```

status can be: "planned" | "eaten_as_planned" | "logged_actual" | "skipped"

SPECIAL BEHAVIOURS:

- On app load, default to today's date and show today's meal plan
- Map today's date to the correct day of the week automatically
- Friday layout shows a warning banner: "Football tonight – keep dinner light!"
- Post-workout whey shake meals highlighted in a distinct accent color
- If it's past a meal's scheduled time and it hasn't been logged, show a subtle "Don't forget to log!" indicator
- Water intake tracker at bottom of daily view (target: 3.5L/day) with +250ml tap buttons
- Streak counter on weekly summary: "X days this week you hit your protein target"

TECH STACK:

- React with hooks (useState, useEffect, useCallback)
- Tailwind CSS for styling (core utility classes only)
- Recharts for charts (import from "recharts")
- window.storage API for persistence
- Single file React component with default export
- No required props
- Do NOT use localStorage or sessionStorage
